

**LAB-AIDS Correlations for
NEXT GENERATION SCIENCE STANDARDS
SCIENCE AND SUSTAINABILITY**

*Donna Parker, LAB-AIDS Senior Consultant
Mark Koker, Ph D, Director of Curriculum & Professional Development, LAB-AIDS*

This document is intended to show how our curriculum products align with the *Next Generation Science Standards*¹ and Common Core documents.

ABOUT OUR PROGRAMS

LAB-AIDS Core Science Programs are developed to support current knowledge on the teaching and learning of science. All materials support an inquiry-driven pedagogy, with support for literacy skill development and with assessment programs that clearly show what students know and are able to do from using the programs. All programs have extensive support for technology in the school science classrooms, and feature comprehensive teacher support. For more information please visit www.lab-aids.com and navigate to the program of interest.

SCIENCE AND SUSTAINABILITY

Science and Sustainability is a full year course in environmental or integrated science. It was developed by the Science Education for Public Understanding Program, at the Lawrence Hall of Science, at the University of California, Berkeley, and distributed nationally by LAB-AIDS, Inc. Development of SEPUP materials is supported by grants from the National Science Foundation.

Science and Sustainability Unit	Student Book Pages	Issue Focus
Living on Earth	4-127	What do humans need to survive? How do our survival needs differ from those of other organisms? In what ways are they related?

¹ <http://www.nextgenscience.org/next-generation-science-standards>

		<p>Students examine the survival needs of all living organisms and investigate the roles of science and technology in human survival. Population growth, food, thermodynamics and energy are introduced as major themes of the course.</p> <p>The unit closes with a student debate on development in the region surrounding Beijing, China, using information obtained from Landsat imagery and other sources.</p>
Feeding the World	132-245	<p>How can we ensure that enough food will be available for the world's growing population? Why do we farm where we do?</p> <p>Students explore concepts in chemical bonding, genetics, plant biology and energy transfer within the context of food production.</p> <p>The unit closes with an investigation of the impact of genetic engineering on food production and biodiversity.</p>
Using Earth's Resources	250-377	<p>How can we improve our basic survival needs are met and what are the trade-offs involved?</p> <p>This section focuses on themes related to the use of</p>

		<p>materials and energy to improve quality of life and to raise the standard of living. Students identify Earth's many resources and explore the nature and environmental impact of their use by humans. Concepts related to petrochemicals, polymerization, energy from chemical reactions and catalysis are investigated.</p> <p>The unit closes with students examining issues and trade-offs involved with global distribution of food and oil.</p>
Moving the World	382-474	<p>What are the trade-offs involved with providing food and fuel to growing world? What are the trade-offs of using biomass as an energy source?</p> <p>Students explore the topics of mechanics, energy, nuclear chemistry, irradiation, and gas laws.</p> <p>Local, relevant community issues, such as water treatment methods, land use decisions, population growth and economic impact, provide the context for this unit.</p>

The National Academy of Sciences, Achieve, the American Association for the Advancement of Science, and the National Science Teachers Association have collaborated over several years to develop the *Next Generation Science Standards* (NGSS). The first step of the process was led by The National Academies of Science, a non-governmental organization commissioned in 1863 to advise the nation on scientific and engineering issues. On July 19, 2011, the National Research Council (NRC), the functional staffing arm of the National Academy of Sciences, released the *Framework for K-12 Science Education*.

The *Framework* was a critical first step because it is grounded in the most current research on science and science learning and it identifies the science all K–12 students should know. The second step in the process was the development of standards grounded in the NRC Framework. A group of 26 lead states and writers, in a process managed by Achieve, has been working since the release of the Framework to develop K-12 *Next Generation Science Standards*. The *Standards* have undergone numerous lead states and all state reviews as well as two public comment periods, the most recent of these in January, 2013. The final release of the Standards coincided with the National Conference of the National Science Teachers Association Annual Conference in San Antonio, TX, the week of April 8, 2013.

The *Next Generation Science Standards* (NGSS) provide an important opportunity to improve not only science education but also student achievement. Based on the *Framework for K–12 Science Education*, the NGSS are intended to reflect a new vision for American science education. *The Next Generation Science Standards* are student performance expectations – NOT curriculum. Even though within each performance expectation Science and Engineering Practices (SEP) are partnered with a particular Disciplinary Core Idea (DCI) and Crosscutting Concept (CC) in the NGSS, these intersections do not predetermine how the three are linked in curriculum, units, or lessons. Performance expectations simply clarify the expectations of what students will know and be able to do by the end of the grade or grade band.

As the reader knows, the *Standards* represent content from several domains: (1) science and engineering practices; (2) cross-cutting concepts; (3) the disciplines of life, earth, and physical science, as set forth in the *Next Generation Science Framework* (NRC, 2012). The Standards themselves are written as performance indicators, and content from the Common Core (<http://www.corestandards.org/>) is included. The following middle level standard from the life sciences is used to show the basic structure. Standards, as performance indicators, are in the white box on top, and the relevant Practices, Disciplinary Core Ideas, and Crosscutting Concepts are listed below in the blue, orange, and green boxes, respectively. Clarification Statements, in red, list assessment boundaries or further describe the standard; statements marked with an asterisk (*) denote integration of engineering content.

MS-LS3 Heredity: Inheritance and Variation of Traits

MS-LS3 Heredity: Inheritance and Variation of Traits		
<p>Students who demonstrate understanding can:</p> <p>MS-LS3-1. Develop and use a model to describe why structural changes to genes (mutations) located on chromosomes may affect proteins and may result in harmful, beneficial, or neutral effects to the structure and function of the organism. [Clarification Statement: Emphasis is on conceptual understanding that changes in genetic material may result in making different proteins.] [Assessment Boundary: Assessment does not include specific changes at the molecular level, mechanisms for protein synthesis, or specific types of mutations.]</p> <p>MS-LS3-2. Develop and use a model to describe why asexual reproduction results in offspring with identical genetic information and sexual reproduction results in offspring with genetic variation. [Clarification Statement: Emphasis is on using models such as Punnett squares, diagrams, and simulations to describe the cause and effect relationship of gene transmission from parent(s) to offspring and resulting genetic variation.]</p> <p>The performance expectations above were developed using the following elements from the NRC document <i>A Framework for K-12 Science Education</i>.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<p>Developing and Using Models Modeling in 6–8 builds on K–5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.</p> <ul style="list-style-type: none"> Develop and use a model to describe phenomena. (MS-LS3-1),(MS-LS3-2) 	<p>LS1.B: Growth and Development of Organisms</p> <ul style="list-style-type: none"> Organisms reproduce, either sexually or asexually, and transfer their genetic information to their offspring. (<i>secondary to MS-LS3-2</i>) <p>LS3.A: Inheritance of Traits</p> <ul style="list-style-type: none"> Genes are located in the chromosomes of cells, with each chromosome pair containing two variants of each of many distinct genes. Each distinct gene chiefly controls the production of specific proteins, which in turn affects the traits of the individual. Changes (mutations) to genes can result in changes to proteins, which can affect the structures and functions of the organism and thereby change traits. (MS-LS3-1) Variations of inherited traits between parent and offspring arise from genetic differences that result from the subset of chromosomes (and therefore genes) inherited. (MS-LS3-2) <p>LS3.B: Variation of Traits</p> <ul style="list-style-type: none"> In sexually reproducing organisms, each parent contributes half of the genes acquired (at random) by the offspring. Individuals have two of each chromosome and hence two alleles of each gene, one acquired from each parent. These versions may be identical or may differ from each other. (MS-LS3-2) In addition to variations that arise from sexual reproduction, genetic information can be altered because of mutations. Though rare, mutations may result in changes to the structure and function of proteins. Some changes are beneficial, others harmful, and some neutral to the organism. (MS-LS3-1) 	<p>Cause and Effect</p> <ul style="list-style-type: none"> Cause and effect relationships may be used to predict phenomena in natural systems. (MS-LS3-2) <p>Structure and Function</p> <ul style="list-style-type: none"> Complex and microscopic structures and systems can be visualized, modeled, and used to describe how their function depends on the shapes, composition, and relationships among its parts, therefore complex natural structures/systems can be analyzed to determine how they function. (MS-LS3-1)
<p><i>Connections to other DCIs in this grade-band:</i> MS.LS1.A (MS-LS3-1); MS.LS4.A (MS-LS3-1)</p> <p><i>Articulation across grade-bands:</i> 3.LS3.A (MS-LS3-1),(MS-LS3-2); 3.LS3.B (MS-LS3-1),(MS-LS3-2); HS.LS1.A (MS-LS3-1); HS.LS1.B (MS-LS3-1),(MS-LS3-2); HS.LS3.A (MS-LS3-1),(MS-LS3-2); HS.LS3-B (MS-LS3-1),(MS-LS3-2)</p> <p><i>Common Core State Standards Connections:</i> ELA/Literacy –</p>		

Various other appendices describe other important elements of the Standards, such as DCI progressions, STS, nature of science, and more.

ABOUT THE LAB-AIDS CITATIONS

The following tables are presented in a Disciplinary Core Idea arrangement – Earth Space Science (ESS), Life Science (LS), Physical Science (PS) and Engineering, Technology and Applications of Science (ETS). This document is intended as a summary document to show the NGSS and Common Core ELA/Math alignment as of January 2015, and is based on input from the SEPUP staff. In addition, not all SEPUP content may appear here, as some may contain science content that falls outside NGSS specifications.

Citations included in the correlation document are as follows:

Unit title, Activity Number and Description:

NGSS Performance Expectations	HS-LS3-3
Science and Engineering Practices	Analyzing and Interpreting Data Developing and Using Models Using Mathematics and Computational Thinking
Crosscutting Concepts	Patterns Systems and System Models
Disciplinary Core Ideas	(ETS1.A)* ETS1.B ETS1.C
Common Core English-Language Arts	WHST.9-12.9
Common Core Mathematics	MP.2

<i>LIVING ON EARTH</i>					
<p>1 SUSTAINABLE LIVING (4 activities)</p> <p>Students are introduced to the global perspective of this course as they examine the possessions of families from four countries and decide which of those possessions are essential for survival. Next, students build upon this concept as they work in small groups to identify materials and supplies needed for survival in various extreme conditions. Class discussion summarizes group outcomes, organizes their ideas into categories and guides them to realize that many survival needs, although apparently quite differently, share a common theme: the transfer of energy. Survival needs and societal comforts are then related to sustainability through an exploration of energy released during the combustion of a renewable and a non-renewable fuel. Finally, students read about Rapa Nui, an island where misuse of resources precipitated a collapse of</p>		<p>(Using Mathematics & Computational Thinking)</p> <p>(Analyzing & Interpreting Data)</p> <p>(Constructing Explanations & Design Solutions)</p>			<p>ELA: RST.11-12.8 RST.11-12.1</p> <p>MATH: (HSN-Q.A.1) HSA-CED.A.1</p>

LIVING ON EARTH					
the society and a sharp decline in population.					
<p>2 SURVIVAL NEEDS: FOOD (5 activities)</p> <p>Student are introduced to, or reacquainted, with the concept of ecosystems and the fact that chemical energy is stored in food. The transfer of energy from organism to organism and from one trophic level to the next is also presented. Food webs and food chains are introduced as a means of graphically representing relationships among producers and consumers. Student simulate and evaluate a method used by field biologists to estimate population size, and use their understanding of the relationships among organisms in an ecosystem to design smaller sustainable environments.</p>	(HS-LS2-3)	<p>Using Mathematics & Computational Thinking</p> <p>(Constructing Explanations & Design Solutions)</p> <p>(Developing & Using Models)</p> <p>Asking Questions & Defining Problems</p> <p>Scientific Investigation Use a Variety of Methods</p> <p>Planning & Carrying out Investigations</p>	<p>Systems & Models</p> <p>Stability & Change</p>	<p>(LS2.A) (LS2.B) (LS2.C)</p>	<p>ELA: (WHST.11-12.8) WHST9-12.7</p> <p>MATH: HSA-CED.A.1 HSA-CED.A.4</p>

		(Analyzing & Interpreting Data) (Obtaining, Evaluating, & Communicating Information)			
<p>3 SURVIVAL NEEDS: TEMPERATURE (4 activities)</p> <p>Students investigate the effects of temperature on yeast fermentation and related their findings to cell physiology. They are introduced to the concept of optimal temperature range for life and read about various adaptations organisms have for maintaining optimal temperature. Students develop a strong basis for understanding the concept of homeostasis and the laws of thermodynamics. The use of energy flow diagrams is introduced as a means of studying heat transfer.</p>	(HS-PS3-1)	<p>(Using Mathematics & Computational Thinking)</p> <p>(Constructing Explanations & Design Solutions)</p> <p>(Analyzing & Interpreting Data)</p> <p>(Science Models, Laws, Mechanisms, & Theories Explain)</p>	<p>Systems & Models</p> <p>Energy & Matter</p>	(PS3.B)	<p>ELA: RST11.12.8 WHST.9-12.2</p> <p>MATH: HSA-CED.A.1 (HSN.Q.A.1)</p>

LIVING ON EARTH					
develop and are introduced to the theory of demographic transition. Students evaluate whether this information could be used to address global problems as they explore the concept of standard of living and its relationship to sustainability and the quality of life.		(Science Models, Laws, Mechanisms, & Theories Explain Natural Phenomena)			(HSN.Q.A.1)
10 PROVIDING FOR THE POPULATION (3 activities) Students apply the concept of sustainable development to land-use decisions in a metropolitan area by examining satellite images of Beijing, China. As they explore these images, students begin to understand the ways the land near Beijing is used. Students then consider a relatively little used pieces of land and decide how it should be used in the future. <i>Feeding the World</i>					
<p>11 FOOD PRODUCTION (4 activities)</p> <p>Students identify the key factors that control human population size as they continue to develop their understanding of the concept of carrying capacity. They focus on the limiting effect of food availability and the steps humans have taken to modify world food production. Students brainstorm factors common to growing of crops, prioritizing those that maximize food production. Students design an experiment using radishes to test the effects of different population densities and/or different fertilizer concentrations on the yield of a food crop. Students also examine how information contained in satellite images can play a role in addressing scientific and decision-making issues related to food production. Finally, students investigate eating patterns around the world in an effort to determine which are most likely to promote sustainability.</p>	<p>(HS-LS2-7) (HS-ESS3-4) (HS-ETS1-1)</p>	<p>Scientific Investigation Use a Variety of Methods</p> <p>Planning & Carrying out Investigations</p> <p>(Analyzing & Interpreting Data)</p> <p>(Constructing Explanations & Design Solutions)</p>	<p>Cause & Effect</p> <p>(Science Addresses Questions about the Natural & Material World)</p>	<p>(LS2.C) (ESS3.C) (ETS1.A) (ETS1.B)</p>	<p>ELA: WHST.9-12.2 (WHST-9.12.7) RST.11-12.8</p> <p>MATH: HSA-CED.A.1</p>

<i>Feeding the World</i>					
Students have been investigating the effects of soil nutrients on plant growth and they begin this set of activities by observing the chemical properties of soil and move toward observing its physical properties. Nitrogen is measured and its relationship to plant growth and soil fertility is examined. Students learn about nutrient cycles and some of the nutrient exchange pathways essential to life on earth. The role of fertilizer as a means of correcting nutrient deficiency and the effect of excess nutrients in an ecosystem are examined.	(HS-ETS1-3)	(Constructing Explanations & Design Solutions)		(ETS1.A) (ETS1.B)	(RST.11-12.8) (WSHT.9-12.9)
13 CELL STRUCTURE AND FUNCTION (4 activities) Students examine the relationship between nutritional needs and cell physiology. Using a microscope and stains students observe plant and animal cells as well as various organelles. Following their observations, students read about the structure and function of these organelles. They, then, use plastic membranes to simulate the role of the cell membrane in regulating the passage	(HS-LS1-2)	(Science Models, Laws, Mechanisms, & Theories Explain Natural Phenomena) (Analyzing & Interpreting Data) (Constructing Explanations & Design Solutions)	Systems & System Models	(LSA1.A)	ELA: (RST.11-12.1) (RST.11-12.8) (WSHT.9-12.9)

<i>Feeding the World</i>					
use in solving the problem of feeding all of the world's people. Students are then asked to present their evidence and make an informed choice about whether society should engage in continued research of genetic engineering and cloning techniques for the purposes of increasing food production.					

SEPUP Unit: Activity	Performance Expectation	Science & Engineering Practices	Crosscutting Concepts	Disciplinary Core Ideas	Common Core ELA/Mathematics
<i>Using Earth's Resources</i>					
<p>21 IDENTIFYING AND SEPARATING HYDROCARBONS (3 activities)</p> <p>Students begin their exploration of hydrocarbons by differentiating several liquids by comparing their chemical and physical properties. They then examine the process of distillation by distilling a mixture of three liquids that simulate crude oil and determining the properties of each fraction. Students also explore the history of petroleum use and discuss the trade-offs involved in making decisions about our consumption of this finite, non-renewable resource.</p>	(HS-ESS3-4)	<p>(Constructing Explanations & Design Solutions)</p> <p>(Analyzing & Interpreting Data)</p>	<p>(Influence of Engineering, Technology & Science on Society & the Natural World)</p> <p>Science is a Human Endeavor</p>	<p>(ESS3.A)</p> <p>(ESS3.C)</p>	<p>ELA: WSHT.9-12.9 (RST.11-12.8)</p> <p>MATH: HSA-SSE.A.1 MP.2</p>
<p>22 THE CHEMISTRY OF HYDROCARBONS (3 activities)</p> <p>Students focus on the bonding properties of various elements – particularly carbon. They build on their understanding of structural formulas as introduced in the previous unit. As students become more familiar with chemical formulas, they see more clearly how these formulas can be used to write chemical equations. This series of activities, with its focus on the</p>	(HS-LS1-6)	<p>(Developing & Using Models)</p> <p>(Scientific Investigations Use a Variety of Methods)</p>	<p>Systems & Models</p> <p>Structure & Function</p>	(LS1.C)	<p>ELA: WSHT.9-12.9</p>

<i>Using Earth's Resources</i>					
chemical structure of hydrocarbons, also introduces organic chemistry.					
<p>23 CLOTHING MATERIALS (5 activities) Students use the <i>Material World</i> to investigate polymer materials, particularly those used for clothing, and the properties that make them useful. Students related the molecular structure of a polymer to its macroscopic behavior. They are introduced to the vast number of organic polymers – both natural and synthetic. Students learn it is possible to design and synthesize polymers for very specific applications.</p>	(HS-ETS1-2)	<p>(Obtaining, Evaluating & Communicating Information)</p> <p>(Developing & Using Models)</p> <p>(Asking Questions & Defining Problems)</p>	(Influence of Engineering, Technology & Science on Society & the Natural World)	ETS1.C	<p>ELA: RST.9.10.7 (WHST.9-12.7) WHST.11-12.8) SL.11-12.4</p>
<p>24 MATERIAL RESOURCES: METALS (3 activities) Students examine the recovery and processing of natural materials by extracting copper from malachite ore. They discuss how copper and other raw materials contribute to our highly technological lifestyle and how the by-products of ore processing can become</p>	(HS-ESS3-4) (HS-ETS1-1)	<p>(Analyzing & Interpreting Data)</p> <p>(Using Mathematics & Computational Thinking)</p>	<p>Cause & Effect</p> <p>Science is a Human Endeavor</p>	(ESS3.A) (ETS1.A)	<p>ELA: (RST.11-12.8) WSHT.9-12.9</p> <p>MATH: HSA-CED.A.1</p>

<i>Using Earth's Resources</i>					
variations in temperature or chemistry can limit microbe populations. The issue of choosing among food preservation options is introduced from a 20 th century magazine article. Students also investigate the relationship between thermal energy and temperature during the changes of state required for refrigeration. They create a graph showing how temperature varies with time as ice water is heated until it boils, then use the graph to estimate the heat of fusion and heat of vaporization of water. This information helps students understand the principles of operation for two food preservation technologies – iceboxes and mechanical refrigerators.		(Analyzing & Interpreting Data) (Scientific Investigations Use a Variety of Methods)	Society & the Natural World)		HSN-Q.A.1 HSA-SSE.A.1
29 REFRIGERATION TECHNOLOGY (4 activities) Students explore the temperature and volume changes associated with the compression and expansion of gases. The information gained from this unit and the previous unit is applied to the understanding of the functioning of a home refrigerator. Students analyze potential refrigerants based on their	(HS-ESS3-4) (HS-ETS1-1)	(Analyzing & Interpreting Data) (Using Mathematics & Computational Thinking)	Science is a Human Endeavor (Science Addresses Questions about the	(ESS3.A) (ETS1.A) ETS1.C	ELA: WHST.9-12.9 (WHST.9-12.2) (RST.11-12.8)

<i>Moving the World</i>					
radiation. They explore the nature of electromagnetic radiation by observing that heat and light are two forms of energy that are transferred to and from various materials in different ways. Quantitative relationships between the wavelength, frequency, and energy of electromagnetic waves are introduced. The use of nuclear energy, which produces high-energy electromagnetic radiation, is analyzed in a variety of applications, including electricity generation, medicine and industry.		(Using Mathematics & Computational Thinking) (Constructing Explanations & Design Solutions)			MATH: HSA-SSE.A.1 (HSN-Q.A.1) HSS-ID.A.1
35 MECHANICAL ENERGY (5 activities) Students review energy transfer and investigate mechanical energy. They exert forces on objects to explore friction, mechanical advantage, efficiency and Newton’s Laws of Motion. They measure the force exerted on an object and relate this force to the resulting changes in the object’s motion as described by position, velocity, and acceleration. Students use their understanding of energy to assess energy	(HS-PS2-1)	(Planning & Carrying Out Investigations) (Analyzing & Interpreting Data) (Using Mathematics & Computational Thinking)	Patterns	(PS2.A)	ELA: WHST.9-12.2 (RST.11-12.8) MATH: MP.2 HSA-SSE.A.1 (HSN-Q.A.1) HSS-ID.A.1
